

The screenshot displays a database management tool interface with a dark theme. On the left, a sidebar shows a project tree with a folder named 'Database' containing a file 'ugali'. Below it, a list of files is shown, with '6.12_SGonzales.sc' selected. The main area is titled 'Output' and shows a log of SQL query execution results. The log includes timestamps, the number of rows affected or retrieved, and the SQL commands themselves. The commands include a SELECT query, an INSERT INTO statement, and a DELETE FROM statement. The output shows that the INSERT statement successfully added a new row to the 'authors' table.
