

2.16 Brief Quiz on Database Design Phases and Relational Database Model

Started: Jan 10 at 7:56pm

Quiz Instructions

The goal of the module quizzes is to help you check your knowledge of the unit content. Answer each question in the quiz.

You will have a total of **three** attempts, and your best score will be kept. There is no time limit for this quiz.

To submit this assignment, click the **Start Quiz** button at the top-right of this page. Once complete, please click **Submit Quiz**.

You're all done here. Click Next to continue.

Question 1 1 pts

Which of the following phase help us with brainstorming the business object?

Logical

Design

Development

Physical

Question 2 1 pts

The logical data model is converted into____phase.

Physical

Hierarchical

Conceptual

Logical

Normal

Question 3 1 pts

Identify the correct design phase.

Conducting the normalization process

Design the model that includes the entities, relationships, attributes and primary key.

Physical

Hierarchical

Conceptual

Logical

Normal

Question 4 1 pts

Coding all database objects in a single schema is a task that occurs in which design phase?

Physical

Hierarchical

Conceptual

Logical

Normal

Question 5 1 pts

The relational model has which of the following characteristics (choose all that apply)?

Allow us to store the entire document in a schema less model

Referential integrity constraints enforcing values from each parent object

Normalized structures that reduce or even eliminate redundant data

Multiple dimensions that align to factual measures and provide context to historical transactions

All of the above

Question 6 1 pts

The relational model has which advantages over the hierarchical model (choose all that apply)?

Reduced storage requirements

Increased flexibility in modeling business processes

Access to data is independent of database structure

Supports more than 1:M relationships

Question 7 1 pts

The appropriate data type for a surrogate primary key is which of the following?

INTEGER

TINYINT

CHAR(50)

VARCHAR(50)

NUMERIC (7,2)

BINAR

Question 8 1 pts

The student ID number contains numeric values. It is currently created as the foreign key inside a table.

The appropriate data type for a foreign key is which of the following?

INTEGER

CHAR(50)

VARCHAR(50)

BINARY

Question 9 1 pts

The best choice of data type for a column that tracks the price of a product at a typical restaurant is which of the following?

INTEGER

TINYINT

CHAR (50)

VARCHAR (50)

NUMERIC (7,2)

BINARY

Question 10 1 pts

The best choice of data type for a column that tracks the name of a product type is which of the following?

INTEGER

TINYINT

VARCHAR (50)

NUMERIC (7,2)

BINARY
